

## Iliatorian Monks in Thebes – A Council in the Hills of the Greece

- I. A Set of Chess Boards and even Society the Game mapped on the board at the Council – a Monk Lectures in the sense of Lecturing the Future of Biblical Tradition and Law

In fact the monks were laughing through the process – the game was won when games were discussed as in fact logical games and the meaning of winning logical games being logical moves – that in fact there is one person who perseveres in Christian logic and all forms of logic and reasoning.

- II. A Lectur

In fact I announce that logic is a paradigm not respected among the Greeks or Moderns, that this is a fable of our logic, which means logic is timeless, eternal and like philosophy a logic which is hard and constant – it is a domain I call a discipline in fact which is maintained as tradition.

Logic means I can overcome the historicized logic into a line with points which then decides on points on logic – in fact strict formal logic – either p or non-p which is also identity and singularity in this side called Second Christ the owner of a wealthy company which follows Financial logic.

- III. Monks walk around turn by turn pointing out logic – forcing as well on points and call it Grace as Logic which is based on two levels – passion of Christ, and Grace of Resurrection which is complex Parable Logic being discerned among one man who is a genius in fact called Quranic Prophet

It does not mean that I will be there in this place at this time, which is Platonism in logic – but that one can say that I will be there based on a logic called timeless and placeless and in fact not in relation or in encounter with relation but outside relation, outside time and outside place – in the void of reason, in Cogito which means dialectical logic –

A – A person is in Madrid in 1989 and I predict this as logic (wrong logic or hard to prove)

B – A person lives in Spain in this period as generally about all Spanish people who live in Spain (parable logic which is correct)

Imagine the two logics – a bet, or a proof of itself – imagine the difference between bets and constant proof – that in Delhi in the 2000 – 2100 period people live in Delhi and are following Delhi which adds all its formations of Biblical laws.

That I follow the Bible is for Christian a logic.
